315	Bolt guide pin	513	Hammer spring	677	Magazine spring		
		514	Hammer spring guide	678	Magazine follower		
		515	Hammer spring guide rod	700	Stock, standard		
		516	Hammer spring guide rod pin	813	Ramp		

How to Remove the Stock

Remove the clip magazine.

Turn the rifle upside down and remove the fastening screws (Fig. 1 A and B). The stock will come off by pressing the butt down while holding the barrel with the other hand. Then pull the stock backwards and it will separate from the action with the rear fastening screw base.

How to Remove the Bolt

Remove the trigger guard pin (Fig. 2C) and the trigger guard assembly can be removed. Then remove the side plate screws and pins on both sides (Fig. 2D and E). Then pull the receiver rear piece backwards. After pressing the hammer down the bolt can be removed.

How to Disassemble the Bolt

Remove the firing pin dowel (Fig. 3F) and then the firing pin and spring. Then push the connector link pin (Fig. 3G) out and connector links come off. After removing the bolt guide pin (Fig. 4H) the breech bolt together with the slide inside can be removed.

It is not recommended to try to disassemble the rifle without the appropriate tools.
